

ERRIN Health WG (HWG)

The Health Working Group covers a wide variety of issues connected to themes of health. The group works with member defined and member lead support groups, in order to engage the members in a positive and appreciative way, making the meetings and events more interesting and diversified. For the moment the themes are; 1) Cancer Research, 2) Healthcare Technologies 3) Future Hospitals and 4) Public Health Research.

Each support group has made a clear definition of it's scope and the main purpose to work with the support groups is to ensure that the ERRIN Health WG becomes an effective means to develop projects that are relevant for the members by bringing to their attention, current issues and activities in relation to the four themes, and to use the HWG as a platform to involve regional actors in new activities in these areas.

The efforts within the support groups will be concentrated mainly on 4 activities:

1. Dissemination of new knowledge on European policies in the area
2. European programmes oversight and early warning
3. Presentations of national policies, programmes and projects
4. Initiating events, briefings and info-meetings in the area
