

Title: Addressing the European digital skills gap of Regions and Cities on AI and Big Data, now for real

ERRIN's DT4REGIONS project together with the Living-in.EU initiative under the lead of ENOLL, with the support of the Computer Vision Center, are organising a joint international online workshop on 12 October 2022 from 9:30 to 11:00 CEST. The event will take place in the frame of this year's European Week of Regions and Cities.

The workshop will demonstrate how having an efficient digital transformation and FAIR AI strategy at local, city and regional level can also enhance the digital skills of European citizens at a wider international level. Providing the analysis of needs on digital skills and initiatives developed together by several European regions and cities, the interactive session will aim at widely discussing the goals of the DT4REGIONS and Living-in.EU joint capacity building programme by involving in this scoping analysis civil society representatives who are usually left outside of such processes. The involvement of participants will be ensured through recourse to the Slido app.

Furthermore, the session will offer an opportunity to promote the scaling up of the FAIR AI procurement processes, and digital transformation skills strategies of targeted regions and cities, from concrete European local contexts up to the international level.
