

Title: New Interoperable Europe Act proposal adopted
Tue, 22/11/2022 - 12:00

The Commission has adopted the [Interoperable Europe Act proposal](#), which will support the creation of a network of digital public administrations to accelerate the digital transformation of Europe's public sector. This act will help create a secure exchange of cross-border data and to share digital solutions. There is also an expected cost saving aspect through this act of between €5.5 and €6.3 million for citizens and between €5.7 and €19.2 billion for businesses dealing with public administrations.

The Interoperable Europe Act introduces:

- A structured EU cooperation where public administrations, supported by public and private actors, come together in the framework of projects co-owned by Member States, as well as regions and cities.
- Mandatory assessments to evaluate the impact of changes in information technology (IT) systems on cross-border interoperability in the EU.
- The sharing and reuse of solutions, often open source, powered by an 'Interoperable Europe Portal' – a one-stop-shop for solutions and community cooperation.
- Innovation and support measures, including regulatory sandboxes for policy experimentation, GovTech projects to develop and scale up solutions for reuse, and training support.

The Interoperable Europe Act's aim of facilitating the digital transformation of Europe's public administrations has also been the overarching objective of the [DT4REGIONS](#) and Go Li.EU (Governance of the [Living-in.EU](#) community) projects, in which ERRIN is a partner. DT4REGIONS offers a European Platform for Regions to enable AI and Big Data collective solutions of public interest. Living-in.EU movement aims to reach and support cities and regions in their digital development through co-creation with citizens.
