

Title: EWRC side event: Personal carbon trading on mobility - an example from Lahti

This event is organised by the City of Lahti European Green Capital 2021, LUT University, Lahti Region Development LADEC Ltd and the Helsinki EU Office and aims to highlight how cities can build a new and innovative policy tool to reduce mobility emissions.

The event will provide examples of how to prepare for today's challenges in urban mobility, where transport accounts for 25% of the EU's greenhouse gas emissions. The event will also look towards the end of the year, when the Commission is expected to publish a comprehensive strategy for Smart and Sustainable Mobility.
