

Title: How to upscale the implementation of digital health solutions for the elderly

WE4AHA is presenting a thematic workshop on upscaling the use of digital health solutions for the elderly. Participants will hear from the private and public sector, academia and the elderly to discuss how smart health services and products can be upscaled further to avoid bottlenecks.

The Stavanger Region EU Office will introduce the session, before 12 speakers share their insights on how countries across Europe and around the world can help hospitals, municipalities and health workers reduce the cost and improve the efficiency of digital tools in healthcare.
