

Title: Integrated techniques for the seismic strengthening and energy efficiency of existing buildings

The European Commission's Joint Research Centre (JRC) is organising a three-day workshop on the European pilot project on integrating techniques improving the energy efficiency of existing buildings. The pilot project aims to define solutions that can reduce seismic vulnerability and increase energy efficiency of existing buildings, consequently increasing their resilience to nature hazards and climate change.

The workshop will gather stakeholders to share insight on future project actions and its potential. Learn more in the attached agenda and register [here](#).
