

Title: Making data useable: regional considerations, best practices and examples

The seventh workshop in SAPHIRE's ongoing series will tackle making data usable. As EU citizens have the right to access healthcare in any EU country, appropriate infrastructures and standards need to be created. This involves large data sets of electronic health records, currently all subject to different governance methods by various authority levels.

This workshop aims to improve attendees understanding of the regional perspective in this huge task of making health data accessible. Learn more and register [here](#).
