

Title: Industry 4.0 - a key element for a green transition

This session is organised by Business-University-Region Pro Silesia Association in collaboration with ERRIN as a side event of the EU Industry Days 2021. While it aims to encourage industry stakeholders to implement innovative solutions to improve production processes, the objective is also to present challenges and obstacles that the industry is facing in the field of the green transition and to explore possible solutions and new paths of collaborations between R&I and industry 4.0, that could support the decarbonisation of the economy and set global standards for the rest of the world. After the event, a document summarising the inputs will be developed.

Please find the agenda of the event attached.

Thank you for attending the meeting. You can watch the recording of the meeting below using the password **Ev7rUpm**.
