

Title: MIREU final event with launch of the CoMMER

The final event of the MIREU project, in which ERRIN is a partner, will take place on 20 April from 12:00 - 16:00 CEST.

[MIREU](#) covers 17 major mining and metallurgy regions of the European Union, from Finland to Spain, from Romania to Ireland. The project topics cover the challenges shared by all mining and metallurgy regions, questions on social license to operate, skills requirements and investment conditions, framework conditions either conducive or hampering the development of the mining and metallurgical industry.

At the MIREU final event, partners will proudly share with you all the essential points we learned during the project. You will have a unique chance to hear real-life examples of the benefits of the new form of collaboration in Europe and globally. This new cooperation is the CoMMER - The Council of Mining and Metallurgy European Regions. Utilising the existing regional network of [ERRIN](#), the CoMMER will form part of an [ERRIN Task Force on Raw Materials](#), which will support the longevity of the initiative.

What can you expect from the event?

- Insights on the regional cooperation and how it supports the mining and metallurgy sector
- Networking with the mining and metallurgy regions
- A conference with representatives of the European Union, regional authorities, research centres, universities, mining and exploration companies, etc.
- Practical showcases of the interregional cooperation and its benefits in EU and internationally.

A full agenda will be available soon. **Please [register on the MIREU website](#).**
