

Title: GREEN WEEK 2021 - Impact of nature-based solutions & sustainable agro-practices in the quality of air/water.

Some four LIFE funded projects are teaming up to market their demonstrative achievements in regard the thematic priority identified by **EU Green Week 2021, Zero Pollution**.

Under the title, **Measuring impact of nature-based solutions & sustainable agro-practices in the quality of air/water in territorial collectivities**, the partners expect to link with a range of issues, such as public empowerment, adaptation to climate change, climatic ecosystems, biodiversity, amongst others.

More precisely, the four running LIFE Projects marketed today are axed in three relevant priorities: how Zero pollution and the improvement of quality of air/wáter is enabled through:

- Public administrations/ collectivities at regional-local level;
- Science actors promoting and testing solutions (indoor and outdoor);
- Particular agricultural disciplines targetted.

The four LIFE funded projects ([LIFE ADAPTATE](#), [LIFE MY BUILDING IS GREEN](#), [LIFE COAST ADAPT](#), [LIFE FOR CITRUS](#)) will communicate these achievements, in a **#EUGreenWeek2021 virtual workshop** to be held the next **Tuesday, May 11th from 11:00** (CET).

Please [find here](#) all the information about the event (agenda, registration).
