CONFERENCE

17th November '22
14.00 – 17.30

LOCATION

European Committee of the Regions,
Batiment Jacques Delors,
Rue Belliard 99/101, Bruxelles

Digitalising Europe's railways: what's in for passengers and freight?

The railway is a sustainable and futureproof mode of transport both for passengers and freight. To make the railways in Europe futureproof and to fulfil the ambitious goals of the European Green Deal a push of digitalisation is needed. On the Brenner axis we are committed to make rail better using new technology and digitalisation to increase the performance on the existing tracks and in the future to use the new Brenner Base Tunnel in the most efficient way possible. This event will highlight concrete solutions and projects on the Digitalisation of Europe's railways with a particular focus on cross-border problems modal shift from road to rail and the inter-modality.
