## ► **Energy communities – New business models for sustainable housing**

### **INVITATION**

Welcome to our seminar and reception on energy communities on the 11th of June, 18.30–20.00 at Nordic House, Rue du Luxembourg 3, 1000 Brussels.

Together with representatives from the European Commission, Housing Europe, the energy community company Via Europa and the Swedish municipalities of Lund and Örebro, we will discuss the role of energy communities from an EU perspective as well as share knowledge and experience from two successful projects in Sweden.

Energy communities have the possibility to vastly transform the energy situation for many stakeholders in the EU. Energy communities may contribute to a more resilient and energy efficient society where renewable energy can be utilized in a cost-efficient way. Still, energy communities are relatively uncommon and more information and experiences from the existing ones needs to be disseminated.
